CAFE SALES

2023 Annual Review

What the numbers say – and what to do about them.

Period	January – December 2023
Prepared by	Tendai Teremuka
Classification	Confidential

At a glance

Here is how the cafe performed across the full 2023 financial year.

Total Revenue	Total Transactions	Avg. Order Value	Best Selling Item
R76,518	**8,576**	**R8.92**	**Salad**
Full year 2023	*Orders processed*	*Per transaction*	*R14,890 – 19.5% of revenue*

Revenue was consistent throughout the year, ranging between R6,018 and R6,658 per month – a variance of just 10.6%. There are no major seasonal peaks or troughs, meaning the cafe has a stable, predictable customer base.

What's Selling

Revenue by Item

Salad is the clear revenue leader. Coffee is the most ordered item but generates the least revenue per unit – a gap worth addressing.

Item	Revenue	Orders	Units Sold	Avg. Price
Salad	R14,890	985	3,120	R15.10
Sandwich	R11,680	969	3,074	R12.04
Smoothie	R11,608	951	3,033	R12.21
Juice	R9,108	1,020	3,187	R8.93
Cake	R9,009	989	3,180	R9.10
Coffee	R6,210	1,012	3,212	R6.13
Tea	R4,179	918	2,954	R4.48
Cookie	R2,775	929	2,898	R2.99

The Coffee Opportunity

Coffee is ordered 3,212 times – more than any other item – yet generates only R6,210 in revenue because it is the cheapest item on the menu at R6.13 per unit. A modest price increase of R1 would generate an additional R3,200 in revenue annually with no change in operations.

How Customers Pay & Order

Payment Methods

Among transactions where payment data was captured, all three payment methods are used almost equally. No single method dominates.

Payment Method	Revenue	Transactions	Avg. Order
Cash	R17,738.50	1,957	R9.07
Digital Wallet	R17,711.00	1,980	R8.94
Credit Card	R17,550.50	1,955	R8.98

In–Store vs. Takeaway

The split between in–store dining and takeaway orders is almost perfectly even – both channels are performing equally well.

Channel	Revenue	Transactions	Share
In–Store	R23,428.50	2,602	50.1%
Takeaway	R22,787.00	2,587	49.9%

Busiest Days

Monday is the busiest day for transactions; Sunday is the quietest. The difference is modest – footfall is spread fairly evenly across the week.

A Note on the Data

31% of Records Are Missing Location or Payment Information

A significant portion of transactions in the source system did not capture the customer's location (In–store / Takeaway) or payment method. These records are included in the revenue and transaction totals above, but they cannot be broken down by channel or payment type. This limits the depth of those specific analyses. The revenue figures and item–level data are complete and fully reliable.

Fixing this at the point of sale – by making location and payment method required fields – would unlock significantly richer reporting in future periods.

Recommendations

Based on the 2023 data, here are four actions to consider:

1	**Increase Coffee pricing by R1.00 per unit.** Coffee is the highest–volume item but the lowest revenue generator. A small price adjustment could add ~R3,200 annually – the single easiest revenue gain available.
2	**Promote Salad and Sandwich bundles.** Salad is the top revenue item and Sandwich is second. A combo deal at a slight discount would encourage higher spend per visit while moving the two strongest performers.
3	**Investigate February and September performance.** These were the two lowest–revenue months (R6,018 and R6,208). A targeted promotion during these months – even a simple loyalty offer – could close the gap to the yearly average.
4	**Fix the missing data at the point of sale.** 31% of transactions have no location or payment method recorded. Making these required fields in the POS system will improve future reporting accuracy at no additional cost.

Questions? I’m happy to walk through any of these findings in detail.
